

TURBONOMIC

Datacenter to SaaS Replacement v0.4 — DRAFT, FOR GEHA REVIEW

Turbonomic — descriptor not recorded in the corpus; complete from vendor documentation

Prepared for: G.E.H.A.

Norris Simmons (Application Owner); John Dean (Director); Dale Gibson (Admin / Support Manager)

Prepared by: Citius Healthcare Consulting

George Galindo, Cloud Architect

Peer Reviewer: Not yet assigned

Document Status: ☒ DRAFT ☐ RELEASE CANDIDATE ☐ PUBLISHED

Date: 26-Aug-2026

Everything a reader needs to orient themselves on this application is gathered here in a single view, so that no one has to hunt through later sections for a date, an owner or a target platform. Each field is owned by the section named beside it, and that owning section remains the authoritative source; this table is corrected to match it rather than the other way round. The scheduling fields — wave placement, migration strategy, cliff date, cliff driver and target cutover date — are recorded here in structured form and narrated in the executive summary that follows. Reading this table alone should be enough to understand what is moving, when it must move, and what forces the timing.

Field	Value
Application Name	<i>Turbonomic</i>
Playbook Index ID	<i>GEHA-DCM-TURBONOMIC-v0.4</i>
Application Version	<i>On-premises appliance deployment (Evidenced — GEHA application discovery Session 2 response TB01 “On-prem”); vSphere-hosted, containerized application within the VM (TB03). The installed software version is not recorded — searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA, required by 2026-09-15 (Appendix B, item 05).</i>
Wave Placement	<i>Wave 2 — plan of record BASELINE v2.1, 26 Aug 2026. Prior tracker-derived placements superseded.</i>
Migration Strategy	<i>RePurchase</i>
Target Cutover Date	<i>01/07/27, Thursday (BASELINE v2.1). CR Friday 12/18/26 — the nearest prior Fridays (1 Jan, 31 Dec) are holidays and the preceding week sits in the Christmas close, so the change record is submitted before the close per the CAB rule; CAB Wednesday 01/06/27.</i>
Application Owner	<i>Norris Simmons — Application Owner (GEHA)</i>
Wave Placement	<i>Wave 2 — plan of record BASELINE v2.1, 26 Aug 2026. Prior tracker-derived placements superseded.</i>
Cliff Date	<i>02/28/27</i>
Cliff Date Driver	<i>Contract/license end — Contract Cliffs tab; annual renewal \$42,687 (Source: Wave Plan Tracker (rev-3), as-of 07-Aug-2026)</i>
Target Cutover Date	<i>01/07/27, Thursday (BASELINE v2.1). CR Friday 12/18/26 — the nearest prior Fridays (1 Jan, 31 Dec) are holidays and the preceding week sits in the Christmas close, so the change record is submitted before the close per the CAB rule; CAB Wednesday 01/06/27.</i>
User Access Method	<i>LDAP/AD authentication to the appliance UI (Evidenced — Discovery Report Inventory v1.0, Application Discovery row 75; Session 2 response TB12 “ldap”). The UI endpoint URL is not on file — requested from GEHA (Appendix B, item 05).</i>
Key Dependencies	<i>VMware vCenter/vSphere — the appliance is “specific to VMware... used to maintain performance within the virtual infrastructure” (Evidenced — BIA_Applications / BIA_Capability, Application BIA, as-of 13-Nov-2025); an Azure connection is established (Discovery Report row 75); ServiceNow (ITSM) and Splunk (monitoring) integrations recorded (Session 2 responses TB07); full inventory in §4.7.</i>
Target SaaS Product	<i>Turbonomic SaaS, or replacement with Azure-native tooling (Azure Advisor, Cost Management + Billing, Monitor & Log Analytics, Autoscale) — Discovery Report row 75 records the RePurchase disposition with both routes; GEHA scope note: “Explore Azure options - Turbonomic SaaS may not be worth the \$”. Decision open — recorded for ruling, not resolved.</i>
Vendor	<i>IBM (Turbonomic — formerly VMTurbo, vendor recorded as “Turbonomics” in the BIA description) (Evidenced — BIA Application BIA, as-of 13-Nov-2025).</i>
Vendor Contact	<i>Not on file — searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA, required by 2026-09-15 (Appendix B, item 05).</i>

Table 1.0 — Key Information

Contents

1. Document Control

Document control establishes who has changed this playbook, who has approved it, and the standard of evidence every statement within it must meet. It exists so that a reader arriving months after authorship can tell how current the content is, whose judgment stands behind it, and how confident to be in any given figure. The revision history is maintained continuously rather than reconstructed at the end, and approvals are recorded against named individuals rather than teams. Taken together these records make the document auditable without recourse to the people who wrote it.

1.1 Version History

Version	Date	Author	Summary of Changes
0.2	13-Aug-2026	George Galindo, CitiusTech	Prepared for GEHA technical review. Evidenced fields cite their source and as-of date; fields GEHA has not yet supplied are shown as dated requests in Appendix B. Program decisions are not restated in the body — they are cited to Appendix A.
0.3	26-Aug-2026	George Galindo, CitiusTech	Re-issued on the approved template (SaaS Migration Playbook Template v4.0 as shared): sections 1.4 and 1.5 restored verbatim from the template; key dates rebaselined to the plan of record (BASELINE v1.9). Approved styling untouched. Full evidence remediation follows in wave order.
0.4	26-Aug-2026	George Galindo, CitiusTech	Evidence fill from source exhaustion (ruling 26 Aug): audit findings applied — the three remaining contradicted-absence tables (§4.1.1 sizing, §4.7 integrations, §4.10 environments) populated from the vCenter export, the BIA files, Discovery Report row 75 and Session 2 responses; stale cliff/engine narratives closed; owner conflict logged — evidenced values written in with citations, remaining gaps re-scoped to the information request register; conflicts recorded for ruling, not resolved. This row also logs the 26-Aug §4.1 host-census and CR patch (turbonomic/node1 appliance written in; CR 12/18/26 per BASELINE v2.0) applied earlier tonight without a Document Control row.

Table 1.1 — Version History

1.2 Approvers

Name	Role	Approval Date
Norris Simmons (Owners tab row 37, BASELINE v2.1)	Application Owner	
Dale Gibson (Owners tab row 37, BASELINE v2.1)	Application Administrator	
To be provided by GEHA	Security Lead	
To be provided by GEHA	Vendor — Point of Contact	
George Galindo To be provided by GEHA	Cloud Architect — Citius Healthcare Consulting Migration & Platform Lead (CHC)	

Table 1.2 — Approvers

1.3 Evidence Standard

Every factual entry in this playbook carries three things: a label declaring whether it is evidenced, inferred or assumed, a named source, and the date on which the value was true. This discipline exists because migration failures are rarely caused by missing information; they are caused by information that was true once and quietly stopped being true. An inference is recorded together with the test that would confirm it, and an assumption is recorded together with the person who must confirm it and the date by which they must do so. Where something

was looked for and not found, that absence is written down as a finding in its own right, because an empty field and a confirmed absence carry very different weight at cutover.

Convention	Applies to every factual field in this document
Label	Mark each value Evidenced, Inferred or Assumed. For Inferred, state the test that would confirm it. For Assumed, state who must confirm and by when — then it becomes an open item in §10.4.
Source and As-Of Date	Name the source system, file or person, and the date the value was true. A value with no as-of date cannot be relied on at cutover.
Absences	Record what was looked for and not found. An empty field and a confirmed absence are different findings.

Table 1.3 — Evidence Standard

1.4 Reading Conventions

Description: The template distinguishes four categories of text — names, descriptions, instructions, and example data — each with a distinct appearance and purpose. Section headings and bold row labels serve as names; descriptions state what an element is; instructions state what to do; example data illustrates the expected form of an answer.

Instructions: Delete instruction text as each field is answered; a completed playbook contains names, descriptions, and content only. Every table carries a numbered caption in the form Table <section><letter> — <name> (for example, Table 3.2 — Ownership & Stakeholders); cite tables by this caption in narrative text.

Text You See	What It Is	What To Do With It
Plain black text	Content — headings, fixed labels, and the answers the author has entered	The finished document. Never delete labels; replace instruction text with answers in plain text
Dark slate text labeled Description	Description — what the section or table is and why it exists	Leave it in place; it survives into the finished playbook
Gray italic text in [brackets] or labeled Instructions	Instructions — what the field requires and the standard it must meet	Read it, answer it, delete it. Unreplaced instruction text means the field was never completed
Blue-gray italic text following "e.g.,"	Example data — an illustration of the expected form, never a suggested answer. Also appears as slash-separated value lists and format patterns such as [MM/DD/YY] or [HH:MM]	Do not copy examples as answers. If an example happens to be true, evidence it as if it were not
☐ Checkbox options	Closed choices — the complete set of valid answers for that field	Tick exactly one unless the instructions say otherwise; a qualifier after the dash still requires text

Table 1.4 — Reading Conventions

1.5 Completion Standard

Description: Completion of this playbook is a defined condition rather than a judgment call, and the criteria that must be satisfied before the document is considered complete and baselined are set out below. It applies uniformly across the playbook library so that completeness means the same thing in every application.

Completion Tier Applied	☐ Full ☐ Reduced — [Full is mandatory for Tier 1, high-complexity, and regulated applications. Reduced is available for low-complexity applications on the approval recorded below]
Reduced Tier Approved By	[Name and date. Reduced applies only where the application is single-tier or single-server, has no clustering, no partner-facing integration, and no functionality gap requiring a decision. If any of those conditions fails, Full applies]

Table 1.5a — Completion Standard

Section	Full	Reduced
§1 Document Control; §2 Executive Summary; §3.1–§3.3	Required	Required
§3.4 Performance Baseline	Required	Batch durations and peak concurrency only
§4 Current State, including all registers	Required	Required — this is the datacenter exit evidence and is not reducible
§4.0 / §5.0 Diagram Records	Required	Diagram attached; record rows optional

Section	Full	Reduced
\$5 Target State	Required	Vendor boundary, contract, obligations, gaps, and identity and data design; remaining subsections completed only where they differ from the vendor's standard configuration
\$6.1 Migration Wave & Sequencing	Required	Omitted where a single move group applies
\$6.2–\$6.8 Preparation	Required	Required
\$7 Cutover Runbook	Required	Required — not reducible
\$8 Post-Cutover; \$10 Risks and Open Items; \$11 Timeline and Effort; \$12 Sign-Off	Required	Required
\$9 Roles & Responsibilities	Required	Omitted; \$3.2 ownership governs

Table 1.5b — Completion Standard

Condition	Met
Every instruction block answered and deleted; no bracketed placeholder text remains	☐ Yes ☐ No
Every role in \$3.2 resolved to a named individual	☐ Yes ☐ No
Every factual field carries a label, source, and as-of date per \$1.3	☐ Yes ☐ No
Every register entry carries a disposition; no entry left blank	☐ Yes ☐ No
Confirmed absences recorded as such rather than left empty	☐ Yes ☐ No
Every open question recorded in \$10.4 with an owner and a due date	☐ Yes ☐ No
Every attachment listed in \$1.6 and stored at the location recorded there	☐ Yes ☐ No
Approvers in \$1.2 have signed	☐ Yes ☐ No

Table 1.5c — Completion Standard

Baselined By [Name and date. A baselined playbook is version-controlled in \$1.1; subsequent changes increment the version]

Table 1.5d — Completion Standard

1.6 Attachment Register

Some material this migration depends on is too large, too technical or too frequently updated to sit inside the playbook itself — configuration exports, discovery output, mappings and architecture diagrams among them. Each such artifact is registered here with its location, its owner and the date it was produced, so that anyone can retrieve the underlying evidence without asking the author. A document referenced in the body but missing from this register is effectively unfindable by anyone other than the person who created it. Registering an attachment also fixes its version, which matters when the same export is refreshed several times across the life of the program.

Attachment	Referenced By	Location	Owner	As Of
Wave Plan Tracker (rev-3) — App Disp, Contract Cliffs, Wave Schedule, Owners	\$1.0, \$3.2, \$3.3, \$11	Evidence corpus (hash-sealed, CHK-051)	George Galindo	07-Aug-2026
Application Interface Details (IFD) full pass	\$4.7, \$4.10	Evidence corpus (CHK-051)	GEHA	12/24/25
Matilda Discovery Assessment Summary	\$4.1	Evidence corpus (CHK-051)	GEHA	08-Aug-2026
Server_VM_Inventory (vCenter export)	\$4.1.1	Evidence corpus (CHK-051)	GEHA	—
SOW ZCON-18111 (signed 30-Jul-2026) — Exhibit C	\$1.0 wave placement, \$10.3	Evidence corpus (CHK-051)	CitiusTech/ GEHA	30-Jul-2026
Decision & Evidence Register (Appendix A ref. REG-001..Appendix A ref. REG-030)	throughout — decisions are cited by REG id, not restated	Evidence corpus (CHK-051)	George Galindo	13-Aug-2026

Table 1.6 — Attachment Register

2. Executive Summary

Turbonomic moves out of the GEHA datacenter under the repurchase disposition; it is the resource-optimization appliance for the VMware estate (formerly VMTurbo); the capability transitions to Turbonomic SaaS or is replaced with Azure Advisor, Azure Monitor, Cost Management and Autoscale. Cutover is planned for 01/07/27 in Wave 2 (BASELINE v2.1, 26 Aug 2026), against a contract cliff of 02/28/27, leaving 52 days of float. Users see one planned outage at cutover, across the 2 business capabilities this application supports; the window is agreed at the readiness review. Datacenter decommissioning, facility exit and hardware disposal are excluded from the current statement of work. The 02/28/27 contract cliff is met with 52 days of float; the main threat to the date is late delivery of the information listed in Appendix B, tracked weekly with GEHA.

Scope is limited to Turbonomic. The committed dates are those recorded in section 11, and every open item is tracked in Appendix B with the date it is needed.

3. Application Overview

3.1 Business Purpose

Formerly VMTurbo. This is a Virtual Appliance specific to VMware. It is built on Linux and is maintained by the Vendor “Turbonomics”. It is used to maintain performance within the virtual infrastructure and provide us with visibility into key recommendations on tweaking system specs to improve upon those performance metrics. || Business impact if unavailable: Impact to the application may result in the loss of VMware monitoring services. || GEHA scope note: Explore Azure options - Turbonomic SaaS may not be worth the \$ || Business capabilities served: 2 (Source: Wave Plan Tracker (rev-3), as-of 07-Aug-2026)

3.2 Ownership & Stakeholders

Migration work stalls more often on unresolved ownership than on technical difficulty, so every role bearing on this application is resolved to a named individual here rather than to a team or a distribution list. The register covers business ownership, technical ownership, security, database and production control, network and DNS, batch scheduling, and the single person empowered to abort a cutover in progress. Where a recorded owner has left the organization, the vacancy is carried forward as an open item rather than quietly inherited by whoever is nearest. Each entry is confirmed with the individual concerned before the go/no-go gate, because a name that has never been verified is not an owner.

Role	Name	Contact	Confirmed
Business / Application Owner	Norris Simmons	Not on file — contact not on file. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Not confirmed

Table 3.2 — Ownership & Stakeholders

3.3 Criticality & Service Levels

The service levels the business receives today are recorded here so that the target design can be measured against a documented reference rather than against recollection or aspiration. Current availability, recovery time and recovery point objectives are captured alongside the peak usage window and the calendar dates a cutover must avoid. Where the target design would deliver less than the current state, that shortfall becomes a gap requiring the application owner's explicit written acceptance rather than a technical footnote. These figures also frame the business conversation about acceptable downtime, which is far easier to hold before a date is committed than after.

Business Criticality	Tier 3 — 2 - Medium (Evidenced — BIA_Capability and Application_DC Migration (Application BIA), as-of 13-Nov-2025)
Current Availability SLA	None defined — GEHA answered the SLA/RTO/RPO question “no” (Evidenced — GEHA application discovery Session 2 response TB13).
RTO (Recovery Time Objective)	24 Hours (Source: BIA_Capability and Application_DC Migration (Application BIA), as-of 13-Nov-2025)
RPO (Recovery Point Objective)	None defined — GEHA answered the SLA/RTO/RPO question “no” (Evidenced — Session 2 response TB13). The BIA records RTO 24 hours (\$3.3 RTO row); no RPO is recorded anywhere — delta reported, not resolved.
Peak Usage Window	Not on file — the Session 2 response “all listed” answers TB05 (which business problems Turbonomic addresses), not a usage window; recommendations run constantly (TB11). searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113,

Business Calendar Constraints	<i>BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA, required by 2026-09-30 (Appendix B, item 12). Open enrolment / open season — GEHA-wide constraint; confirm application-specific dates with the owner. Program blackouts: 2026-11, 2027-11 (SOW: production cutovers barred).</i>
Regulatory / Compliance Scope	<i>Business impact: Impact to the application may result in the loss of VMware monitoring services. (Source: BIA_Capability and Application_DC Migration (Application BIA), as-of 13-Nov-2025)</i>

Table 3.3 — Criticality & Service Levels

3.4 Performance Baseline

Performance complaints after go-live cannot be resolved against an undocumented baseline, so the application's present behavior is measured and recorded here before anything moves. Typical and worst-case response times for the most-used functions, elapsed times for significant batch jobs, observed peak concurrency and transaction volumes are all captured with the conditions under which they were measured. The measurement date matters as much as the figure: a baseline older than the last significant change to the application is not a baseline. These numbers become the exit criteria for performance testing, converting a subjective judgment into a pass or fail.

Transaction / Screen Response	<i>Not on file — searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA, required by 2026-09-30 (Appendix B, item 12).</i>
Batch and Report Durations	<i>Not on file — searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Table 3.4 — Performance Baseline

4. Current State

What follows is a complete account of the application as it exists in the datacenter today, and it serves two purposes at once. It is the specification from which the Azure target is sized and designed, and it is the evidence of what was actually running when the estate was assessed — the record that datacenter exit is measured against. Every component, data store, account, certificate, scheduled job, interface and hardcoded value that the migration must address is captured here rather than discovered during the cutover window. Because this section is the exit evidence, it is not reducible even for low-complexity applications.

4.0 Current State Architecture Diagram

The diagram presents the current deployment in a single view and acts as the visual counterpart to the registers that follow. Every server, integration, network object and identity flow recorded in this section should be locatable on it, and any component that appears on the diagram but is absent from the registers is by definition undocumented. It is drawn from evidenced sources — configuration exports, firewall rules, DNS records and discovery output — rather than from memory or from superseded architecture material. Its practical use is to walk the move-group boundaries and brief the cutover team on what exists today before anything is changed.

Not on file — INSERT CURRENT STATE ARCHITECTURE DIAGRAM HERE. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Table 4.0 — Diagram Record

4.1 Host Resource Specifications

Server / Component	Role	OS / Version	Environment	Holds Data?	CMDB / Asset ID
--------------------	------	--------------	-------------	-------------	-----------------

Server / Component	Role	OS / Version	Environment	Holds Data?	CMDB / Asset ID
turbonomic (DNS: node1) — Lenexa, LIVE appliance. A second VM of the same name exists in Lee's Summit, POWERED OFF (CentOS 4/5, HW v7) — stale prior-generation appliance, decommission candidate, not a migration host.	Vendor virtual appliance (single VM)	CentOS 7 (64-bit); 8 vCPU / 128 GB / ~1.78 TB disk	PROD (single environment)	Yes — appliance-local config and history	Lenexa · 10.0.0.80

Table 4.1 — Host Resource Specifications

Provenance note (26 Aug 2026): the earlier "confirmed absence" was a census defect — the appliance is named plain "turbonomic" (DNS node1) and never linked to the application in the corpus pass. Hosts evidenced from Server_VM_Inventory (vCenter export), LS and LX tabs; corroborated by Discovery Report Inventory v1.0, Application Discovery row 75 ("Single VM", owner Adriane Westhoven, connection to Azure established). The powered-off Lee's Summit twin is raised as a decommission-candidate finding. Owner conflict logged explicitly: Discovery Report row 75 records Adriane Westhoven; the BASELINE v2.1 GEHA Application Owners tab (row 37) records Norris Simmons — the owners file governs per the 24-Aug ruling; both names recorded, neither silently resolved.

4.1.1 Sizing & Utilization Baseline

Allocated capacity and measured utilization are recorded side by side, because the difference between them is where cloud cost is won or lost. Target sizing is derived from what the workload actually consumes rather than from what was provisioned for it, which is frequently several times larger. The observation window is stated with every figure, since a short sample will not capture cyclical peaks such as month-end or open-season processing. Where no measurement exists, that absence is recorded plainly and the associated sizing risk is carried into the risk register rather than hidden inside an estimate.

Server	vCPU Allocated	Memory Allocated	Disks (Count / Size / Type)	Peak CPU %	Peak Memory %	Peak IOPS / Throughput	Network Throughput	Measurement Source & Window
turbonom ic (DNS node1) — live LX appliance	8	131,072 MB (128 GB)	2 disks / 1,780,000 MiB (~1.78 TB)	Not recorded — no turbonom ic/node1 row in any visible Matilda tab (Host Details, Instance Assessm ent Summary , Instance TCO, Applicati on TCO and Applicati on Summary Details all searched)	Not recorded — same Matilda absence	Not recorded — same Matilda absence	Not recorded — same Matilda absence	Allocation from Server_VM_Inventory (vCenter export), LX tab — poweredOn, CentOS 7 (64-bit), 10.0.0.80, HW v13; GEHA response corroborates 8 vCPU / 128 GB / 1.5 TB (Session 2 TB04). Utilization is genuinely unmeasured — the absence is stated per column, no longer as a blanket confirmed absence.

Table 4.1.1 — Sizing & Utilization Baseline

4.1.2 Operating System & Platform Readiness

The platform characteristics of the outgoing on-premises estate are captured here even though the destination is a vendor-operated tenant, because the source environment determines how much work stands between today and cutover. An unsupported or end-of-life operating system narrows the window in which the legacy system can safely continue to run in parallel, while clustering, hardware-bound license keys and SAN-attached storage each add a distinct thread of unwind work that has to be sequenced rather than simply switched off. Recording these attributes also establishes what has to be extracted, and from where, before the vendor can load anything. Where an attribute is inherited from shared infrastructure rather than owned by this application, that is noted so the effort is attributed to the correct workstream. The values below describe the current state; the target state for each is the vendor's platform and is therefore not restated.

	Not on file — searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Table 4.1.2 — Operating System & Platform Readiness

4.2 Application Software & Dependencies

The software layer is documented here in the terms that matter to a migration: exact installed version, whether the vendor supports that version on the target platform, and what else must travel with it. Scheduled jobs, file storage dependencies, license binding and client-side components are each recorded, because every one of them is a thing that silently stops working when the server underneath changes. License binding deserves particular attention: a license tied to a MAC address, host fingerprint or dongle will fail at the moment of cutover, and re-hosting it carries a vendor lead time. An unsupported configuration is a go/no-go item, not a hypercare issue.

	Not on file — Exact version and build as installed. Record how it was evidenced — installer, admin console, vendor portal — not the in. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Table 4.2 — Application Software & Dependencies

4.3 Application Delivery & Client Access

How users reach the application determines how much of the cutover work is invisible to them and how much lands on their desks. Browser access, installed thick clients, published or virtualized delivery, desktop-image deployment and mobile access each carry different execution, dependency and decommission implications. Where a client sits inside a managed desktop image, the image rebuild and redeployment cadence becomes a program dependency rather than a task the migration team controls. Local configuration held on endpoints — cached credentials, mapped drives, hardcoded server names, printer bindings — is captured here because each item must be updated or removed at cutover.

Primary Access Method

Application URL(s)

Installed Client Detail

Not on file — Browser via URL / installed thick client / published or virtualized application / mobile application / terminal or emula. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Table 4.3 — Application Delivery & Client Access

4.4 Data & Database Tier

The data tier is documented here as the migration source: what exists, how much of it there is, how it will be extracted and what obligations survive the source system. Engine version, edition, collation and compatibility level are recorded because they gate whether a managed platform target is available or whether a straight lift is the only supported option. Volume is captured at database granularity rather than instance total, since the load window is driven by the largest objects and by unstructured attachments that are routinely underestimated. Retention and legal-hold obligations are recorded explicitly, as they outlive the server and must be satisfied somewhere after it is gone.

	<i>None — Turbonomic has no on-premises SQL database (Evidenced — Discovery Report Inventory v1.0, Application Discovery row 75 “No On Prem SQL DB”; Session 2 response TB11 “Don’t have on-prem SQL DB”). Configuration and performance history are held in the appliance-internal datastore (containerized application within the VM — TB03).</i>
Database Engine & Version	
Data Volume	<i>Appliance-internal data only: 2 disks / ~1.78 TB allocated on the live appliance (Server_VM_Inventory, LX tab); no database-level size record exists. Whether historical performance analytics must migrate to the target is unanswered (the TB11 question was answered only with “Don’t have on-prem SQL DB”) — requested from GEHA (Appendix B, item 16).</i>
Attachments / Unstructured Data	<i>Not applicable — no on-premises database tier; no attachment store recorded (Discovery Report row 75; Session 2 TB11).</i>
Export Method & Access	<i>Not on file — the vendor’s supported export/onboarding path for an on-prem appliance moving to SaaS is vendor-owned; not recorded in the evidence pack (searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application); requested via the vendor engagement (Appendix B, item 05).</i>
Historical Data & Retention	<i>Performance-data retention period not recorded (the TB11 retention question was answered only with “Don’t have on-prem SQL DB”) — requested from GEHA (Appendix B, item 12). No legal-hold obligation on file.</i>
Instance Sizing & Utilization	<i>Appliance sizing in §4.1.1 (8 vCPU / 128 GB / ~1.78 TB, vCenter export; corroborated by Session 2 TB04). No separate database instance exists.</i>
Database Count & Individual Sizes	<i>None — no on-premises SQL databases (Discovery Report row 75; Session 2 TB11).</i>
High Availability Topology	<i>Standalone — single VM appliance, no HA cluster (Evidenced — Session 2 responses TB02 “Single VM”; Discovery Report row 75 “Single VM”).</i>
Collation & Compatibility Level	<i>Not applicable — no SQL database tier (Discovery Report row 75; Session 2 TB11).</i>
Encryption at Rest	<i>Not on file for the appliance-internal datastore — searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B, item 16).</i>
Scheduled Database Jobs	<i>None recorded — no SQL Agent estate exists (no on-prem SQL DB); no optimization actions are automated in the appliance today (Session 2 response TB09 “nothing is automated at the moment”).</i>
Target Compatibility Assessment	<i>Not applicable — no database migration occurs under the repurchase; the appliance retires once the SaaS or Azure-native replacement is in service.</i>
Cross-Database / Linked Server Dependencies	<i>None recorded — no system reads an on-premises Turbonomic database (none exists — Discovery Report row 75; Session 2 TB11); consumers of Turbonomic output are ServiceNow and Splunk via the integrations in §4.7.</i>

Table 4.4 — Data & Database Tier

4.5 Identity & Access

Identity is documented here with particular care because it is the area most often assumed to transfer intact and the first to fail after a rehost. Authentication method, identity provider, account populations, privileged access and multi-factor enforcement are each recorded with counts rather than general descriptions. Group resolution, service-account authentication and credential paths all depend on directory decisions taken in the target design, so the current position must be precise before that design is fixed. Entries in the registers that follow must each resolve to a target decision; an unmapped group or an unaccounted service account is a post-cutover outage waiting to happen.

	Enterprise position recorded at discovery: "van led a discussion on current user and app authentication methods, including the use of Entra ID, conditional access policies, service accounts, managed identities, and RBAC for security groups. + Tom and Dale confirmed that on-premises Active Directory groups replicate via AD Connect, and permiss" (ai notes - 2025.11.26 Identity and Access) "e groups. + Khurshid asked about single sign-on and guest access, and Tom clarified that Entra ID is used for SSO and guest access is supported. + Tom confirmed that single sign-on is managed through Entra ID, and guest access is supported for third-party vendors. + Dale explained that Octa is no lo" (ai notes - 2025.11.26 Identity and Access). Application-specific configuration still to be confirmed with the owner. (Source: GEHA Identity & Access discovery session, 26-Nov-2025)
Authentication Method	
Identity Provider	Program record — "van led a discussion on current user and app authentication methods, including the use of Entra ID, conditional access policies, service accounts, managed identities, and RBAC for security groups. + Tom and Dale confirmed that on-premises Active Directory groups replicate via AD Connect, and permiss" (ai notes - 2025.11.26 Identity and Access) "e groups. + Khurshid asked about single sign-on and guest access, and Tom clarified that Entra ID is used for SSO and guest access is supported. + Tom confirmed that single sign-on is managed through Entra ID, and guest access is supported for third-party vendors. + Dale explained that Octa is no lo" (ai notes - 2025.11.26 Identity and Access) (Source: GEHA Identity & Access discovery session, 26-Nov-2025)— name the product and version, not just the directory
Internal User Accounts	—
External / Partner Accounts	—
Access Governed By	Not on file — Active Directory security groups / direct AD user assignment / local application accounts / a mix — name the mechanism. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Privileged Access	Not on file — Admin accounts, PAM or vaulting in use, and who approves elevation. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
MFA in Use	☐ Yes ☐ No — Not on file — searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B)

Table 4.5 — Identity & Access

4.5.1 Single Sign-On

The single sign-on configuration in effect today is recorded here in enough detail to be reproduced or deliberately replaced. Integrated Windows Authentication and LDAP binds are not federated protocols, and they continue to function in Azure only where the target remains domain-joined with line of sight to a domain controller — which is a

directory decision, not a networking one. Protocol, identity provider, trust configuration, signing certificates, claims released and the identifier that uniquely identifies a user are all captured, since an unstable identifier breaks user mapping in the target. Access paths that bypass single sign-on entirely are recorded too, because they survive an identity change unnoticed.

	Program record — "van led a discussion on current user and app authentication methods, including the use of Entra ID, conditional access policies, service accounts, managed identities, and RBAC for security groups. + Tom and Dale confirmed that on-premises Active Directory groups replicate via AD Connect, and permiss" (ai notes - 2025.11.26 Identity and Access) "e groups. + Khurshid asked about single sign-on and guest access, and Tom clarified that Entra ID is used for SSO and guest access is supported. + Tom confirmed that single sign-on is managed through Entra ID, and guest access is supported for third-party vendors. + Dale explained that Octa is no lo" (ai notes - 2025.11.26 Identity and Access) (Source: GEHA Identity & Access discovery session, 26-Nov-2025) Yes ☐ No ☐ Partially — Not on file — state which user populations are federated and which are not. If No, name the actual mechanism and stop here. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Is Federated SSO in Use?	
Protocol	Not on file — SAML 2.0 / OIDC / WS-Federation / Kerberos or IWA / header-based. Kerberos and IWA are not federation — flag them as suc. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Identity Provider Product & Version	Not on file — ADFS farm and version, Entra ID, Okta, PingFederate — and whether it is on-premises or cloud-hosted. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
IdP Ownership	Not on file — searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B)
Trust / Relying Party Configuration	Not on file — Relying party trust or enterprise application name, entity ID or issuer, ACS or reply URL, and where the metadata is pub. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Signing & Encryption Certificates	Not on file — Certificate, thumbprint and expiry for both IdP and SP sides. Every certificate here must also appear in §4.8, and its e. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses,

Claims / Attributes Released

*DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Not on file — Attribute names and sources — UPN, email, employee ID, group claims. Note any attribute the application depends on that. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).*

NameID Format & Unique Identifier

Not on file — What identifies a user to the application, and whether it is stable across a name change or email change. An unstable id. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

SSO Flow Supported

Not on file — IdP-initiated, SP-initiated, or both — and which one users actually use today, since that is the bookmark that changes a. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

Session Lifetime & Timeout

Not on file — Token lifetime, idle timeout, and re-authentication behavior. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

MFA Enforcement Point

Not on file — At the IdP, at the application, or not enforced — and under which conditional access or policy rules. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

Non-SSO Access Paths

Not on file — Local or emergency accounts, API keys, or service logins that bypass SSO entirely. These survive an SSO change and are r. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

IdP Migration Dependency

Not on file — Whether the identity provider is itself being migrated, upgraded or retired under another program workstream. If so, thi. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

Table 4.5.1 — Single Sign-On

4.5.2 Authorization & Entitlement Model

Authorization is a separate question from authentication, and it is recorded here layer by layer: what the directory grants, what the application grants, and what the database grants independently of both. The authoritative permission store is named explicitly, together with the person able to export it, because a description of a role model is not an entitlement list. Data-scoping and field-level rules are captured with the mechanism that enforces them, since a rule the target platform cannot enforce becomes a risk rather than a configuration task. A current export of who holds what is the only way to prove after cutover that the target matches the source.

	Not on file — Directory groups only / in-application roles only / both, with the directory granting entry and the application granting. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Where Entitlement Is Determined	
Authoritative Permission Store	The system that holds the definitive answer to "what can this user do"— AD, the application database, a config file, a spreadsheet maintained by an administrator. Name it, and name who can export it
In-Application Role Model	Not on file — Roles defined inside the application, what each confers, and how a user is assigned to one. Attach the export; a descrip. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Data Scoping / Record-Level Rules	Not on file — Restrictions on which records a user can see — by region, business unit, client, claim type, ownership. State the rule a. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Field-Level or Action-Level Restrictions	Not on file — Fields a role can view but not edit, actions gated by approval, dollar or volume thresholds. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Segregation of Duties Constraints	Not on file — Combinations of access that must not be held together, and what enforces the rule today. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Database-Level Permissions	Not on file — Direct database access held by users or tools outside the application — logins, roles, read access for reporting. These. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report

Delegated Administration

Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

Not on file — Who can grant access without going through IT, and what they can grant. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

Access Request & Approval Workflow

Not on file — How a new user gets access today — ticket, manager approval, form, verbal. This process must exist for the target on day. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

Access Review / Recertification

Not on file — Cadence, who attests, when it was last performed, and whether findings were remediated. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

Documented Entitlement Baseline

Not on file — Whether a current export of who has what exists. If not, take one before cutover — it is the only way to prove the target. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

Table 4.5.2 — Authorization & Entitlement Model

4.5.3 Non-Interactive & Bypass Access

Mechanisms that operate outside interactive sign-on — API keys, tokens, certificates, key pairs, shared accounts, allowlists and vendor support access — are inventoried here because they persist unchanged through identity migrations and rarely appear in access reviews. The checklist is completed first so that each mechanism is positively confirmed present or absent, rather than left ambiguous by omission. Every entry records who or what uses it, where the credential is held, when it expires or rotates, and whether it bypasses single sign-on altogether. Anything that bypasses sign-on must be closed or formally retained by recorded decision before the go/no-go gate.

Present	Mechanism	Present	Mechanism
☐	API key or static token	☐	OAuth client credentials
☐	Bearer or personal access token	☐	Mutual TLS client certificate
☐	SSH key pair for SFTP	☐	LDAP or directory bind account
☐	Shared or generic account	☐	Smartcard or certificate logon
☐	IP allowlist used as access control	☐	Direct database login
☐	Kerberos delegation or constrained delegation	☐	Local application administrator account
☐	Vendor or third-party support access	☐	Other — specify below
☐	Confirmed none present		Checked by / date:

Table 4.5.3b — Step 2: Mechanism Register

4.5.4 Active Directory Security Group Register

Every Active Directory group that governs access to this application is registered here with its effective membership, its owner and its target mapping. Membership counts are taken after nested groups are expanded, because a count read from the group object understates real access and nesting is a common source of entitlement nobody intended to grant. Groups shared with other applications are identified explicitly, since they cannot be retired alongside this application and become coupling findings for the dependency register. Each group resolves either to a target role or to an explicit retirement decision; none may be left unmapped.

Group Name (full DN)	Access It Grants	Effective Members	Nested Groups	Group Owner	How Membership Is Granted	Used By Other Applications?	Target Role Mapping
Not on file — searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and BIA_Applications_20251113, GEHA_BIA_Capability_and_Application, vers_D BDetailed s_Inventory, DBA Migration Artifact s, Discovery Report Inventory v1.0 (incl. Table 4.5.4 — Active Directory Security Group Register

4.5.5 Service & Application Account Register

Service and application accounts are registered here separately from user accounts, because they fail differently: nothing breaks at cutover, and then a scheduled job runs and fails silently hours later. Each account records what it authenticates to, where its credential is held, its expiry or rotation position, the rights it carries, and the job or integration that depends on it. Every account must trace to a scheduled job, an integration or an explicit retirement decision; an account tracing to none of these is recorded as an open item. Where a managed identity can replace an account in the target, that substitution is recorded, and where it cannot, the reason is stated.

Account Name	Type	What It Authenticates To	Credential Holder / Vault	Password Policy & Expiry	Rights Held	Depends On / Used By	Disposition at Cutover
Not on file — searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery	Not on file — AD service account / gMSA / local account / SQL login / application-internal account. Table 4.5.5 — Service & Application Account Register

4.6 Network

Only the network configuration that must change as a consequence of this migration is documented here; configuration unaffected by the move is deliberately out of scope to keep the record actionable. DNS records are captured with their current resolution, time-to-live values and owning team, because lowering time-to-live ahead of cutover is a lead-time activity rather than a cutover step. Firewall rules that exist solely for this application are identified so they can be removed at decommission rather than left standing indefinitely. External and partner connectivity is recorded separately, since changes at the far end run on someone else's change process and timetable.

DNS Records	<i>GEHA operates 144 DNS zones (read: DHCP_DNS_list DNS tab). The records for this application must be identified within them before cutover; per-record TTLs are not held in the export. (Source: DHCP_DNS_list (DNS tab))</i>
Firewall Rules to Remove	<i>Not on file — searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA, required by 2026-09-01 (Appendix B, item 06).</i>
External / Partner Connectivity	<i>Not on file — Dedicated circuits, ExpressRoute, third-party source IPs and any connectivity not covered by the VPN register — each imp. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).</i>

Table 4.6 — Network

4.6.1 VPN & Remote Connectivity

Remote access and site-to-site connectivity are treated separately here because they behave differently after a move to Azure. Remote access requirements change rather than disappear, and the answer depends on the connectivity model chosen in the target design, including whether traffic to Azure endpoints is forced back through the corporate tunnel — a frequent and avoidable cause of post-cutover performance complaints. Site-to-site tunnels are jointly owned with external organizations, so their encryption domains, authentication material and far-end contacts are recorded with the lead time each partner's change process requires. Where this application was the only reason a population held VPN access, that access is reviewed rather than left in place.

Is Remote Access VPN Required to Reach the Application?	<i>Program record — "it ExpressRoute uplink as a potential risk for migration timelines, but stated that using VPNs or publicly reachable storage accounts can bypass this limitation. Firewall management and automation + Ron stated that Azure firewall rules are managed via bicep templates during app deployment, and noted" (ai notes - 2025.11.26 network and connectivity) "from on-premises infrastructure through edge switches, Palo Alto firewalls, Megaport, and ExpressRoute to Azure. + Ron explained that V hubs are deployed in each Azure region with secured hubs using Azure Firewall, all regions are directly peered, and on-premises ranges connect directly to the Xbox " (ai notes - 2025.11.26 network and connectivity) (Source: GEHA Network & Connectivity discovery session, 26-Nov-2025) Yes ☐ No ☐ Only some populations — Not on file — searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Split Tunnel Behavior	<i>Not on file — Whether all traffic or only corporate traffic traverses the tunnel. Tenant traffic forced back through the tunnel adds l. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).</i>
User Populations Dependent on It Still Required After Cutover?	— ☐ Yes ☐ No ☐ Only for other applications — Not on file — if this application was the only reason a population held VPN access, that access should be reviewed rather than left st. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

Table 4.6.1a — Remote Access VPN

Each site-to-site tunnel is registered individually because changes at the far end are outside GEHA's control and run to the partner's timetable, not the program's. The register records what traffic the tunnel carries, its encryption domain, the device terminating it, the authentication material and its expiry, and a named contact at the far end together with their required notice period. Tunnels shared with other applications are identified explicitly so they are not retired alongside this one. Each tunnel resolves to retirement, retention or modification, and that disposition is agreed with the partner before the cutover window opens.

Tunnel / Peer	Far-End Organization	Traffic Carried	Encryption Domain	Termination Device	Authentication & Expiry	Far-End Contact	Used by Other Applications?	Disposition
Not on file — searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DB Details_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Yes ☐ No ☐ Partially — Not on file — if No, state how traffic reaches the application — direct DNS, reverse proxy, or client-side — and complete no further r. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).</i>
-------------------------------------	---

Table 4.6.2a — Load Balancer Configuration

The load balancer configuration is recorded from an exported running configuration rather than from screen captures, because the settings that break applications — persistence profiles, health monitor strings, traffic policies, source address translation and client-IP preservation — are precisely the ones screenshots omit. Each virtual server is documented with its address, the hostnames it serves, its pool members, its balancing method and its TLS termination model. A virtual server that fronts more than one application cannot be retired with this application alone and is recorded as a coupling finding. Certificates presented by the load balancer are cross-referenced to the certificate register and their expiry checked against the cutover date rather than today's date.

Platform & Version Device Names & HA Model	<i>Not on file — Vendor, model, software version, and whether physical or virtual appliance. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Table 4.6.2b — Load Balancer Configuration

4.7 Integrations & Dependencies

Every integration this application participates in is inventoried here, in both directions, with the protocol, frequency and criticality of each. The team owning the far side of the interface is named, because that team controls when the change can be made and their lead time frequently exceeds the migration team's own. Implicit dependencies receive the same treatment as formal interfaces: scheduled jobs on other systems, license servers, mail relays and hardcoded addresses all fail in the same way and for the same reason. This inventory is the input to the target integration design and to the re-pointing tracker executed during the cutover window.

System	Direction	Protocol / Method	Frequency	Owning Team (Far Side)	Criticality
VMware vCenter / vSphere virtual infrastructure	Outbound (monitors and recommends)	vSphere APIs — “Virtual Appliance specific to VMware... used to maintain performance within the virtual infrastructure” (BIA); underlying platform vSphere (Session 2 TB03/TB06)	Continuous — “recommendations run: Constant” (Session 2 TB11)	GEHA virtualization / platform team (named owner not on file — Appendix B, item 05)	High
Microsoft Azure	Outbound	“Connection is established with Azure as well” — platform integration (Discovery Report Inventory v1.0, Application Discovery row 75; Session 2 TB06 “VMware and Azure”)	Continuous	GEHA cloud platform team (named owner not on file — Appendix B, item 05)	Medium
ServiceNow (ITSM)	Outbound	ITSM integration — “ServiceNow integrated” (Session 2 response TB07; Discovery Report row 75)	On event	GEHA ServiceNow team (named owner not on file — Appendix B, item 05)	Medium
Splunk (monitoring)	Outbound	“Splunk monitors” the appliance (Session 2 response TB07; Discovery Report row 75)	Continuous	GEHA monitoring team (named owner not on file — Appendix B, item 05)	Medium
LDAP / Active Directory	Outbound (authentication)	LDAP bind for UI authentication (Session 2 response TB12; Discovery Report row 75 “LDAP/AD”)	On login	GEHA identity team (named owner not on file — Appendix B, item 05)	Medium

Table 4.7 — Integrations & Dependencies

4.8 Certificates & Secrets

Every certificate and secret the application depends on is inventoried here, with expiry evaluated against the planned cutover date rather than against today. A certificate that is comfortably valid now but expires during the migration window will fail at the least convenient moment, and renewal frequently involves a third party with its own lead time. Each entry records its purpose, where the private material is held, who custodies it, and the action to be taken — renewal, retirement, or migration to a vault in the target. Certificates presented by load balancers and identity providers appear here as well as in their own sections, so that nothing depends on a reader cross-referencing two lists.

Certificate / Secret	Purpose	Holder / Vault	Expiry	Expires Before Cutover?	Action
Not on file — searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Table 4.8 — Certificates & Secrets

4.9 Data Classification

The sensitivity of the data this application holds, and the regulatory obligations that follow from it, are recorded here because they constrain target region, encryption, logging and retention decisions rather than merely describing them. Presence of protected health information, personally identifiable information or cardholder data is stated explicitly rather than implied by the application's business purpose. Residency constraints are captured because they determine not only where the workload runs but where its backups and diagnostic logs may be held. Current encryption at rest and in transit is recorded so the target can be shown to preserve or improve the position rather than quietly weaken it.

Data Sensitivity	Criticality tier 3 (2 - Medium). Business impact: Impact to the application may result in
-------------------------	---

	the loss of VMware monitoring services. (Source: BIA_Capability and Application_DC Migration (Application BIA), as-of 13-Nov-2025) <i>Public</i> ☐ <i>Internal</i> ☐ <i>Confidential</i> ☐ <i>Restricted</i>
PII / PHI / PCI Present	☐ Yes ☐ No — Not on file — searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B)
Data Residency Constraints	
Current Encryption at Rest	☐ Yes ☐ No — Not on file — searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B)
Current Encryption in Transit	<i>Not on file — searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Table 4.9 — Data Classification

4.10 Environment Inventory

Every environment is inventoried here, not only production, because non-production estates carry real data, real integrations and real license obligations far more often than expected. Each environment records its purpose, its endpoint, the nature of the data it holds and the internal move group it belongs to. Non-production is migrated ahead of production deliberately, so that the process is proven on a system whose failure costs nothing. Environments that are dormant or unused are identified here as retirement candidates rather than migrated by default.

Environment	Purpose	URL / Endpoint	Data Source	Migration Wave
PROD (single environment)	Live business use — resource optimization and performance monitoring of the VMware estate	Appliance UI endpoint not on file — requested from GEHA (Appendix B, item 05)	Live data — appliance-local configuration and performance history	Single move group — cutover 01/07/27 (BASELINE v2.1). Evidenced — Server_VM_Inventory LX (live appliance); Discovery Report row 75 “Single VM”; the doc's own §4.1

Table 4.10 — Environment Inventory

4.11 Availability & Backup Position

Availability and backup posture is recorded here to the extent that it bears on the migration itself, rather than as a description of steady-state operations. Cluster and replication topology is captured because it determines which migration methods are available, and a verified restore point is captured because it is the only genuine protection across the cutover window. The recovery point the current configuration actually delivers is recorded alongside the objective the business believes it has, since the two frequently differ and the target should not be designed to an aspiration. Retention and legal-hold obligations, and any standby copy holding live data, are recorded because both outlive the source system.

	Standalone — a single powered-on VM appliance; no HA cluster (Evidenced — Session 2 response TB02; Server_VM_Inventory LX tab). The powered-off LS twin is a stale prior-generation appliance, not a standby (§4.1).
High Availability Topology	
Known Single Points of Failure	<i>The single appliance is itself the single point of failure; business impact of loss is loss of VMware monitoring/optimization services only (Evidenced — BIA Application BIA, as-of 13-Nov-2025).</i>
Backup Product & Schedule	<i>No Backup Policy is recorded for the live LX appliance in the vCenter export (Backup Policy column empty — absence recorded); the powered-off LS twin carries “2WK Backup” (Evidenced — Server_VM_Inventory LS/LX). No database backup regime applies (no on-prem SQL DB). Confirmation of appliance protection requested from GEHA (Appendix B, items 12 and 17).</i>
Most Recent Verified Restore	<i>Not on file — no restore record for the appliance; searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA, required by 2026-09-15 (Appendix B, item 17).</i>
Retention & Legal Hold	<i>Not on file — no retention or legal-hold record for appliance data; searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B, item 12).</i>
Achieved RPO Today	<i>None defined — GEHA answered the SLA/RTO/RPO question “no” (Session 2 response TB13).</i>
DR Replica or Standby Copy	<i>None functioning as DR: the powered-off LS VM “turbonomic” (CentOS 4/5, HW v7, no IP) is a stale prior-generation appliance and cannot serve as a standby — decommission candidate; disposition decision recorded for ruling (register W2-TURB decision row).</i>

Table 4.11 — Availability & Backup Position

5. Target State

The target state is defined here decision by decision, with the reasoning recorded alongside each choice. Unlike a vendor-operated service, this environment is designed and operated by GEHA, so an undocumented rationale cannot be reviewed and will not survive the staff changes that occur across a program of this length. Each decision names what was chosen, what was rejected, and who accepted the resulting trade-off. Read against the current-state section, the difference between the two is the migration.

5.0 Target State Architecture Diagram

The diagram presents the current deployment in a single view and acts as the visual counterpart to the registers that follow. Every server, integration, network object and identity flow recorded in this section should be locatable on it, and any component that appears on the diagram but is absent from the registers is by definition undocumented. It is drawn from evidenced sources — configuration exports, firewall rules, DNS records and discovery output — rather than from memory or from superseded architecture material. Its practical use is to walk the move-group boundaries and brief the cutover team on what exists today before anything is changed.

Not on file — INSERT VENDOR-PROVIDED TARGET STATE DIAGRAM HERE. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

Diagram Name	Vendor's title for the diagram, as supplied
Provided By	Not on file — Vendor name and the named individual who supplied it, from §5.3. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Integration endpoints — each interface from §4.7, its protocol, direction, and authentication	☐ Yes ☐ No ☐ Partial	—
Network path — egress FQDNs, IP allowlisting, private connectivity if offered	☐ Yes ☐ No ☐ Partial	—
Data location and boundary — where data resides, where backups and logs are held, and the residency position in §5.5	☐ Yes ☐ No ☐ Partial	—
What remains on-premises — components not retired by this migration	☐ Yes ☐ No ☐ Partial	—

Table 5.0b — Coverage Assessment

5.1 Vendor & Product

This section fixes the commercial identity of what is being bought, so that every downstream design decision is made against a specific product and edition rather than a vendor name. Edition matters more than it appears to: feature availability, API entitlements, retention limits and support response times are all edition-scoped, and a design validated against one tier will not necessarily hold on another. The deployment model records whether the tenant is multi-tenant public, single-tenant hosted, or a private instance, which in turn governs the network path in Section 5.9 and the compliance evidence required in Section 5.5. The selection rationale is captured so that a future reader can reconstruct why this product was chosen over the alternatives without recovering the original evaluation. Together these fields form the reference that the rest of this playbook depends upon.

	Not on file — searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Table 5.1 — Vendor & Product

5.2 Shared Responsibility Boundary

A SaaS migration does not remove operational work; it redistributes it, and this table is where that redistribution is made explicit domain by domain. Each row states who performs the work in the steady state after cutover — the vendor, the organization, or both — so that no operational duty is assumed to have been absorbed by the subscription. Vendor-owned responsibilities are verified against the contract or published service description rather than accepted from a sales conversation, because an unverified assumption here becomes an unstaffed duty after go-live. Responsibilities that remain with the organization are not merely noted; they generate concrete build, cutover or operational tasks that must appear in Sections 6, 7 or 8. A row marked Joint is incomplete until the split of duties within it is described, since shared ownership without a boundary is the most common source of post-migration gaps.

Table 5.2 — Shared Responsibility Boundary

5.3 Contract, Licensing & Exit

The contractual position is recorded here because it constrains the technical design in ways that are easy to discover too late. Licensing establishes the entitlement ceiling — user counts, environments, API volumes — against which the migration plan must fit, and an overrun found during load testing is a procurement problem, not an engineering one. Service level commitments set the availability and support expectations that the operational model in Section 8 has to be built around, including what recourse exists when the vendor is the cause of an outage. Exit rights and data portability are captured at entry rather than at exit, since the ability to retrieve data in a usable form is negotiated most effectively before signature and is the practical limit on reversibility. Renewal and termination dates are recorded so that they can be checked against the migration schedule and any downstream contract dependency.

	Not on file — Start and end dates, renewal terms, notice period. The end date is a future cliff — record it in the program risk regist. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Table 5.3 — Contract, Licensing & Exit

5.4 Vendor Obligations & Commitments Log

This log isolates the subset of the plan that the organization cannot execute itself, which is the portion of the schedule most exposed to slippage. Each entry names a specific deliverable — a tenant provisioned, a certificate issued, an integration endpoint enabled, a migration utility released — together with the date it is required and the date the vendor has committed to. A named vendor contact is recorded for each, because escalation without an owner is not escalation, and written evidence of the commitment is attached so that the date is traceable to something other than recollection. Every entry also carries a fallback position describing what the program does if the commitment is missed, which converts a dependency into a managed risk rather than a single point of failure. Entries remain in the log after delivery so the record of what was promised and when it arrived stays intact.

Commitment	Need d By	Vendor Contact	Evidence	Status	Fallback If Not Delivered

Table 5.4 — Vendor Obligations & Commitments Log

5.5 Compliance & Security Verification

Assurance for a vendor-operated service rests on evidence the organization has actually obtained and read, and this section records that evidence rather than the vendor's claims about it. Each artifact — an audit report, penetration test summary, certification, or architecture attestation — is logged with its issue date, expiry date, the reviewer who assessed it and the findings that assessment produced. Expiry dates are recorded because an assurance artifact that lapses mid-contract leaves an evidentiary gap that has to be refreshed on a schedule. Findings are captured even when they are accepted, so that residual risk is visible to the approvers rather than filtered out during review. A certification asserted in marketing material but not backed by an obtained artifact is treated as unevidenced and is recorded as such.

Table 5.5 — Compliance & Security Verification

5.6 Identity & Access

The target identity design must account for every entry in the current-state identity registers; unresolved entries are the single most common cause of access failure after cutover. The directory model is stated first, since it determines whether domain-joined authentication remains available or whether the application must move to a federated protocol. Group-to-role mapping is recorded one row per source group, with no group left unmapped, and service accounts resolve either to a managed identity or to a credential with a named rotation owner. Break-glass and privileged access are defined explicitly, including how their use is detected.

	☐ Yes ☐ No — Not on file — if the current state in §4.5.1 is not federated, this is new work with its own build, test and IdP change control — size. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Is SSO In Scope for the Target?	
Federation Protocol	Not on file — SAML 2.0 / OIDC — as supported by the vendor on the edition purchased. Confirm the edition includes it; SSO is frequentl. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Table 5.6 — Identity & Access

5.7 Data Mapping

Data mapping is the work that determines whether the migrated service is usable on day one, and it is almost always larger than it first appears. This section does not attempt to reproduce the mapping itself — that is maintained as a working attachment because it changes throughout build and rehearsal — but records where the authoritative version lives, who owns it, and what state it is in. It also captures the shape of the transformation: which legacy entities map one-to-one, which require consolidation or splitting, and which have no target equivalent and therefore force a decision about archival or loss. Fields that carry regulatory or retention obligations are called out because they cannot be quietly dropped during transformation. The mapping's completion state is a gating input to the rehearsal in Section 6.3 and to the load plan in Section 6.2.

	<i>Not on file — Field and object mapping from legacy schema to the vendor data model. Attach it; this row records where it lives and who. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).</i>
Source-to-Target Mapping	
Transformation Rules	<i>Not on file — Reformatting, deduplication, code and value mapping. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Table 5.7 — Data Mapping

5.8 Integrations

Every integration recorded in the current-state inventory is redesigned here against the target product, because a SaaS boundary rarely accepts the same interface the legacy system exposed. For each integration the target mechanism is stated — API, file transfer, event stream, or connector — together with the direction of flow, the authentication method and the party responsible for building it. The vendor's operational limits are captured alongside the design, since API rate caps, maximum payload sizes and permitted batch windows are hard constraints that shape both the initial load plan and the sustained steady-state volume. Where a limit is incompatible with observed legacy volumes, that conflict is recorded here rather than discovered during rehearsal. These constraints feed directly into the load approach in Section 6.2 and the length of the cutover window in Section 7.3.

Table 5.8 — Integrations

5.9 Network Connectivity

Reaching a vendor-hosted tenant is a network design problem even when no infrastructure is being built, and this section defines that path for each class of consumer. It records how interactive users reach the service, how server-side integrations authenticate and egress, and how external partners connect, since these three routes frequently differ in both protocol and control point. The organization-side changes required to enable that access are enumerated explicitly — firewall rules, egress allow-lists, proxy exceptions, DNS entries, certificate trust and any private connectivity — because each is a change request with its own lead time and approver. IP allow-listing on the vendor side is captured where it applies, together with who maintains that list after go-live. Anything requiring a change to a shared network control is flagged so that its owner outside this application is identified before the cutover window is fixed.

	Not on file — Public internet over TLS, or a private connectivity option if the vendor offers one. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Connectivity Model	
Vendor Endpoints to Allow	Not on file — FQDNs and ports required outbound, including any regional variants. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery

Table 5.9 — Network Connectivity

5.10 Tenant Configuration & Functional Gaps

This section records how the tenant is actually configured, which is the practical definition of the service the organization will operate. Configuration items covered include organizational structure, roles and permission models, workflow and business rules, branding, notification behavior and any environment separation between development, test and production. Recording configuration here rather than leaving it in the vendor's console makes the design reviewable, reproducible and auditable, and gives the rebuild path if a tenant has to be recreated. The section also names, at a summary level, the areas where the target product does not match the legacy application, with the individual items itemized in the register that follows. Configuration decisions that were made to work around a functional gap are cross-referenced to that gap so the reasoning is not lost.

	<i>Not on file — Approval chains, business rules, notifications configured in-app. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).</i>
Workflow & Business Rule Configuration	
Custom Fields & Objects	<i>Not on file — Fields added to match business requirements. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).</i>
Reports & Dashboards	<i>Not on file — Standard versus custom, and who rebuilds the custom ones. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).</i>
Sandbox / Non-Prod Tenant	<i>Not on file — Availability, refresh mechanism, and whether it can hold production-like data. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).</i>
Configuration Baseline & Freeze	<i>Not on file — Where tenant configuration is recorded, and when it freezes ahead of cutover — see §6.5. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).</i>

Table 5.10 — Tenant Configuration & Functional Gaps

5.10.1 Functional Gap Register

A functional gap that is known and dispositioned is a manageable change; one that surfaces during user acceptance is a schedule event, and this register exists to force the former. Each gap is recorded as a discrete

entry describing the legacy capability, the target product's behavior, the affected user population and the operational impact if nothing is done. Every entry carries a disposition — accept, configure around, build an extension, adopt a process change, or await a vendor roadmap item — with a named owner and a target date. Where the disposition depends on a future vendor release, written vendor evidence is required and is recorded in the vendor obligations log, because an unevidenced roadmap commitment is not a mitigation. Open gaps without a disposition are treated as blockers to the go/no-go decision rather than as outstanding actions.

Gap	Legacy Behavior	Disposition	Detail	Owner
Not on file — Capability missing or different. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).	Not on file — What the legacy app does today. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).	☐ Workaround ☐ Accepted loss ☐ Roadmap dependency ☐ Blocker	Not on file — Workaround steps, or roadmap date and evidence reference. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B). 5.11 Target Delivery & Client Access

	Not on file — Browser via URL / vendor desktop client / mobile application / published through VDI — name all that apply, with the sha. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Target Access Method	
Tenant URL(s)	Not on file — Production and non-prod entry points, and how users receive them — portal tile, intranet link, pushed bookmark, email no. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Anything Installed on the Endpoint?	☐ Yes ☐ No — Not on file — if yes: package, version, deployment mechanism, owning team, and administrative rights required. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Supported Browsers / Versions	Vendor-supported browsers and minimum versions, checked against the estate's actual build — not against the current release

Device Trust & Conditional Access	Not on file — Whether access is gated on managed or compliant devices, and what happens to unmanaged, BYOD or partner-owned devices. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Network Path to the Tenant	Not on file — Direct internet, proxy, VPN — and whether users on the current path in §4.3 can reach it unchanged. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Access From Outside the Corporate Network	Not on file — Whether remote and partner users reach the tenant differently, and what they need. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Change From the User's Point of View	Not on file — Stated in one or two plain sentences: what a user does differently on day one. This feeds §6.6. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Legacy Client Dependencies to Retire	Not on file — From §4.2 and §4.3 — desktop clients, add-ins, printer and scanner integrations, hardcoded URLs, mapped drives. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Accessibility Requirements	Not on file — If applicable, with vendor confirmation. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

Table 5.11 — Target Delivery & Client Access

5.12 Scheduled Job & Batch Orchestration

Scheduled jobs are frequently assumed to travel with the server, which is true only where the scheduler runs locally. Where an enterprise scheduler triggers the job, every one requires its own endpoint change, credential and agent work carried out by the team that owns the scheduler, on their timetable. Each job recorded earlier resolves here to a target trigger, an owning team, an identity it runs as, and the date and time of its first execution after

cutover together with the person confirming it succeeded. Time-zone differences between the source datacenter and the target region are checked, since a job scheduled for 02:00 local will not run at the same hour after the move.

Job / Batch	Trigger Today	Target Trigger	Change Required	Owning Team	Runs As	First Run After Cutover

Table 5.12b — Scheduled Job & Batch Orchestration

6. Migration Preparation

Everything that can be completed before the cutover window is completed before it, so that the window itself is reserved exclusively for work that genuinely cannot be pre-staged. Replication, rehearsal, testing, freeze arrangements, readiness confirmation and communications all belong here rather than on the night. The discipline is simple and repeatedly proven: the shorter the list of decisions taken under time pressure, the higher the probability the cutover completes without incident. Each preparation activity carries an owner and an exit condition, so readiness is demonstrated rather than asserted.

6.1 Migration Wave & Sequencing

Large SaaS replacements rarely move every user on a single night, and this section defines the internal sequence by which business units, modules or user populations transition to the target platform. Each internal wave is described with its population, its scope of functionality, its planned date and the criteria that must be met before the next wave starts. These internal waves are deliberately distinguished from the program wave recorded in the Key Information table, which governs when this application moves relative to the rest of the estate. Where a phased approach requires the legacy system and the target tenant to run concurrently, the period of coexistence is stated along with which system is authoritative for data during that period. Any dependency that forces two internal waves to move together, such as a shared integration or a single data set, is called out so the sequence cannot be reordered unknowingly.

Wave	Scope (Users / Module)	Dependency	Planned Date
1	<i>Not on file — searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Table 6.1 — Migration Wave & Sequencing

6.2 Data Migration Build & Load

This section defines how data physically moves from the legacy estate into the vendor tenant, covering extraction, transformation, validation and load. The tooling is named for each stage, together with where each stage executes and who operates it, since responsibility often crosses the vendor boundary mid-pipeline. The volume being moved is stated in the units that actually govern duration — record counts, file counts and total size — because vendor ingestion limits are usually expressed per record or per call rather than per terabyte. Durations recorded here are taken from rehearsal measurements rather than estimates, as an estimated load duration is the single most common cause of an overrun cutover window. The approach also states how much of the load can be completed ahead of the window and what must occur inside it, which is what determines the length of the outage.

	Not on file — Tool or process, and who runs it. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Extract Method	
Transform Method	Not on file — ETL tooling, scripts, or vendor migration utility — and who owns defects in it. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Load Method & Sequence	Order objects load into the tenant,
Measured Load Duration	Not on file — From rehearsal in §6.3 — an estimate here is a guess until a rehearsal has produced a number. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Attachment Load Method & Duration	Not on file — Mechanism and measured elapsed time for file volume. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts,

Delta Sync Approach

Discovery Report Inventory v1.0 (incl. Not on file — How changes between the rehearsal load and the final load are captured, if a parallel run is used. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

Table 6.2 — Data Migration Build & Load

6.3 Migration Rehearsal

The rehearsal is the only activity in this playbook that produces measured facts rather than planned intentions, which is why it governs the cutover plan rather than informing it. A full rehearsal exercises the complete sequence — extract, transform, load, validate and functional check — against production-representative volumes, so that the timings it produces can be relied upon when the window is fixed. Each rehearsal is recorded with its date, the data set used, the durations observed at each stage, the defects raised and their resolution. A rehearsal is not complete when the load finishes; it is complete when its output has been reconciled against the source and the discrepancies have been explained or corrected. Where a rehearsal is repeated, the results of each pass are retained so that improvement between passes is visible and the final timings are traceable.

Rehearsal Scope	Not on file — Full extract, transform and load, or a defined subset — state what is excluded and why. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Environment	Not on file — Which tenant, and how closely its data resembles production. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Number of Passes Planned	Not on file — Minimum two — the last must be defect-free. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Success Criteria	Not on file — Load completes within the cutover window, reconciliation passes at the \$7.8 tolerance, no open Sev1 or Sev2 defects. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Timings Captured	Not on file — Elapsed time per step, carried into the \$7.3 schedule. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

Defects Raised & Cleared

requested from GEHA (Appendix B).

Not on file — Reference to the defect log, with the count outstanding. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Table 6.3 — Migration Rehearsal

6.4 Testing Strategy

The testing strategy defines what will be tested, by whom, and the conditions under which testing may start and must stop. Functional, data validation, integration, performance, security, backup and recovery testing each carry their own entry and exit criteria, expressed as conditions rather than as opinions. Performance exit criteria are set against the documented baseline recorded earlier, which converts an argument about whether the system feels slower into a measurement. Sign-off is by named individuals, because an untested assumption discovered after go-live is indistinguishable from a defect.

Test Type	Scope	Owner	Entry Criteria	Exit Criteria
Functional / UAT	Not on file — Core business workflows in the tenant. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. GEHA (Appendix B).

Table 6.4 — Testing Strategy

6.5 Change Freeze

The change freeze is the period during which both source and target stop changing so that what is tested is what is migrated. Patching and restarts are included in the freeze rather than exempted from it, because either can invalidate replication that has taken weeks to build. The freeze is enforced by a named individual through a stated mechanism rather than by request, and the authorizing change record is referenced here. The cutover date is checked against the program blackout calendar and the business calendar, and that check is recorded with the date it was performed.

Source System Freeze Window	<i>Program blackout months: 2026-11, 2027-11; production cutovers are barred in those months under the SOW. (Source: SOW ZCON-18111, signed 30-Jul-2026)</i>
Tenant Configuration Freeze	<i>Not on file — When vendor-side configuration stops changing ahead of cutover. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).</i>

Blackout Window Check	<i>SOW blackout clause — “vernance outcomes, and business constraints are confirmed. During blackout periods, production cutovers will not be scheduled unless specifically approved by G.E.H.A. Planning, design, build, testing, remediation, and non-production activities may continue. Waves Expectations 0 Application inventory va” (Source: SOW ZCON-18111, signed 30-Jul-2026)</i>

Table 6.5 — Change Freeze

6.6 User Training & Change Management

A SaaS replacement changes the interface, terminology and often the process that users have worked in for years, so adoption is a delivery risk rather than a communications afterthought. This section defines who requires training, at what depth, and in what form — instructor-led, recorded, documentation, or vendor-delivered — with the dates on which each is available relative to cutover. It identifies the super-users or champions who provide first-line support in the days after go-live, since early support demand concentrates sharply and rarely arrives at the service desk first. Materials that must be authored by the organization rather than supplied by the vendor are listed with owners, because they are frequently assumed to be included and are not. The plan also states how readiness will be confirmed before the go/no-go decision rather than assumed from attendance.

Access Change to Communicate	<i>Not on file — The one or two sentences from \$5.11 describing what a user does differently on day one — new URL, new client, new login. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Adoption Metrics	<i>Not on file — How adoption is measured after go-live, and by whom. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).</i>

Table 6.6 — User Training & Change Management

6.7 External Party Notification & Coordination

Any party outside the organization that connects to this application must be told what is changing and when, and this section tracks that coordination individually rather than as a single task. Each external party is recorded with the interface it uses, the change it must make, the named contact, the date the request was issued and the date confirmation was received. Partner lead times are controlled by the partner and not by the program, which makes them the most frequent cause of cutover date movement and the reason this coordination starts well before the technical build is finished. Where a partner requires its own change window or testing cycle, that requirement is captured as a dependency on the cutover date rather than as an action within it. Parties that have not confirmed by the agreed checkpoint are escalated as risks to the go/no-go decision.

Notification Lead Time Required	<i>Not on file — Contractual or practical notice period for partners. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).</i>
Notification Owner	<i>Not on file — searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Change Required on Partner Side	<i>Not on file — Endpoint, credential, IP allowlist, certificate — describe the general pattern; track per partner in §7.7. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113,</i>

Partner Test Window

BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
Not on file — When partners can validate against the new endpoint before cutover. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

Non-Responding Partners

Not on file — Escalation path and the decision rule if a partner has not confirmed by the go/no-go gate. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

Table 6.7 — External Party Notification & Coordination

6.8 Readiness Review

The readiness review is held before the go/no-go gate and confirms that every team with a part to play knows its role, holds tested access to the target, and has agreed what proves their step succeeded. It is emphatically not the first review of the plan; teams arriving unfamiliar with the runbook at this point is itself a finding. Access is tested rather than assumed, because credentials that have never been exercised fail at the least convenient moment. Rollback criteria are agreed here so that the decision to abort, if it comes, is a judgment against pre-agreed conditions rather than an argument at three in the morning.

	<i>Not on file — searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Rollback Criteria Agreed

vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B). Not on file — Each team knows what would trigger rollback and its part in it. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

Outstanding Actions

Not on file — Carried to \$10.4 with owners and dates. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

Table 6.8 — Readiness Review

7. Cutover Runbook

7.1 Go / No-Go Gate

The go/no-go gate is the formal point at which cutover is authorized, and it is decided against documented evidence rather than confidence. It is scheduled with enough lead time that a no-go outcome can actually be acted upon, which means days rather than hours before the window. A single named individual owns the decision, the rule by which the decision is made is stated in advance, and the attendees whose absence would postpone it are named. Each criterion references the section that produces its evidence, so the gate is a review of facts already established rather than a fresh discussion.

	<i>Not on file — MM/DD/YY HH:MM, with timezone. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Table 7.1b — Gate Criteria

7.2 Cutover Team & Bridge

The cutover team is named here individually, with a designated backup and a reachable telephone number for every role, because a role covered by a team name is a role nobody is holding at two in the morning. Availability is stated as hours rather than as intent. The bridge is live for the whole window, the status update cadence is fixed in advance, and the escalation path states who is woken and in what order. This section exists so that the window is worked by a team that knows its shape before the first step begins.

Table 7.2b — Bridge & Communications

7.3 Cutover Schedule

The cutover schedule is the executable document for the window, written to be used by staff who were not present at the design sessions. Absolute clock times with a stated time zone are used rather than relative durations, and every duration is taken from the rehearsal rather than estimated. Each step carries a named owner, a verification that confirms completion before the next step begins, and the condition that would trigger rollback. Cumulative elapsed time is shown so that the total is visible before the window is committed; if the total exceeds the agreed outage, the plan is not ready.

#	Phase	Time (TZ)	Elapsed	Action	Owner (Named)	Verification	Rollback Trigger

Table 7.3 — Cutover Schedule

7.4 Data Cut-Off

The data cut-off is the moment the source system stops accepting work, and it is stated as an exact time with a time zone rather than as a rough intention. Transactions already in flight at that moment need a defined treatment, as does business activity that occurs while the system is unavailable and must be re-entered afterwards. Batch files and feeds that arrive during the window are held somewhere deliberate rather than lost. Getting this wrong produces data that exists in neither system, which is the hardest category of migration defect to detect and to remedy.

<i>Cutover date of record: 01/07/27, Thursday (BASELINE v2.1, Plan Control) — CR Friday 12/18/26 (submitted ahead of the Christmas close per the CAB rule), CAB Wednesday 01/06/27. Exact clock time to be set at the readiness review. Prior engine narrative (01/03/28 achievable / 04/01/28 plan) superseded 26-Aug-2026.</i>	
Cut-Off Timestamp	
In-Flight Transaction Handling	<i>Not on file — What happens to work started before cut-off and not completed — hold, complete manually, or re-enter after go-live. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Manual Capture During the Window	<i>Not on file — How business activity is recorded while both systems are unavailable, and who re-enters it. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).</i>
Late-Arriving Data	<i>Not on file — Batch files or feeds that land during the window, and where they are held. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).</i>

Table 7.4 — Data Cut-Off

7.5 Account & Access Migration

Access is what makes a tenant a service, and this section defines how identities, entitlements and access paths transition at cutover. It records the source of identity for the target product, the provisioning mechanism, how groups and roles map from the legacy model, and how privileged access is established and controlled. The work is deliberately split into what can be pre-staged — accounts created, groups populated, federation configured and tested — and what must occur inside the window, which is usually only enablement and a verification pass. This split is what keeps the outage short, since bulk provisioning performed during the window is a predictable cause of overrun. The section also states how access to the legacy application is withdrawn and when, so that two live access paths do not persist after cutover.

Accounts Built Ahead of Cutover	—
Group-to-Role Mapping Verification	<i>Not on file — Evidence that every group in the §4.5.4 register resolved to its intended target role — sampled per group, not per user,. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).</i>
Direct-Assignment Users Handled	<i>Not on file — Users who held access outside any group, confirmed as carried</i>

Service Account Cutover

across or deliberately dropped. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

Service & API Credentials

Not on file — Each account from the \$4.5.5 register switched to its target credential or disabled, with the owning team named and the. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

External / Partner Account Activation

Not on file — Issued to which team, stored where, rotation owner named. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

Legacy Access Disablement

Not on file — Method and timing, coordinated with \$7.7. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

De-Provisioning of Departed Users

Not on file — When accounts in the legacy system are disabled, by whom, and how it is evidenced. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

Federation Cut & Verified

Not on file — Accounts that should not be carried across at all — reviewed and confirmed before build. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

Non-SSO Access Paths Closed

Not on file — Metadata exchanged, trust enabled, and a successful SP-initiated and IdP-initiated login tested for at least one member. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).

Not on file — Local and bypass accounts identified in \$4.5.3 disabled or deliberately retained, with the decision recorded. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses,

	<i>DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).</i>
Programmatic Credentials Issued	<i>Not on file — Each row of the \$4.5.3 non-interactive and bypass access register replaced, retained or revoked — API keys, certificates. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Table 7.5 — Account & Access Migration

7.6 Integration Re-Point

Each integration is re-pointed individually by the team that owns it, and this tracker records the change type, the named person executing it, whether it can be pre-staged, and the notice their process requires. Integrations are the most common cause of a cutover that appears successful and then degrades over the following hours as batch cycles begin to run. Implicit dependencies receive the same treatment as formal interfaces: scheduled jobs on other systems, license servers, mail relays and hardcoded addresses. Every entry carries evidence of a smoke test rather than an assertion that the change was made.

7.7 External Party Cutover Tracker

External parties operate on their own change calendars and cannot be compressed to suit the program, so each is tracked here individually from notification through confirmation to tested. A named contact is recorded for every party, not a generic mailbox, and the lead time their process requires is captured explicitly. The fallback position is stated for each party in case they are not ready on the night, since discovering that during the window leaves no room to manoeuvre. Partner readiness is a go/no-go criterion rather than a matter to be resolved during hypercare.

Table 7.7 — External Party Cutover Tracker

7.8 Reconciliation & Acceptance

Reconciliation compares the target against the source using control totals agreed before the window opens, and tolerance is expressed as a number rather than as a judgment. For financial and regulated objects that number is zero unless the application owner has accepted otherwise in writing. Record counts, financial totals, file counts and attachment volumes are each compared, and failed records go to a named queue with a named owner and a date by which they will be worked. Acceptance is given by the application owner at a recorded time, which is what converts a technical completion into a business one.

Control Totals	<i>Record counts and financial or volumetric totals by object, source versus target —</i>
Tolerance	<i>Not on file — The numeric threshold — state it. Zero for financial and regulated objects unless the Application Owner has accepted oth. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Table 7.8 — Reconciliation & Acceptance

7.9 Rollback

Rollback is defined in advance because the moment it is needed is the worst moment to design it. This section states the conditions under which rollback is invoked, who holds the authority to make that call, and the point in the cutover sequence beyond which return to the legacy application is no longer practical. The procedure itself is recorded step by step, including how access is restored, how integrations are repointed and how any data created in the target tenant during the failed cutover is preserved or discarded. The time required to execute rollback is stated, because it must fit inside the agreed outage window alongside the forward path. Where rollback is genuinely not available after a defined point, that is recorded plainly so the go/no-go decision is made with that constraint understood.

Rollback Trigger Criteria	<i>Not on file — Objective conditions, tied to the verification failures in §7.3. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).</i>
Rollback Decision Deadline	<i>Not on file — The clock time by which rollback must be invoked to complete before the business day — after this, the decision is made. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Table 7.9 — Rollback

8. Post-Cutover & Service Handover

The post-cutover period is treated as a defined stage with entry and exit conditions rather than as an indefinite settling-in. Hypercare, verification of operational controls in production, decommissioning of the source and the review that feeds the next migration each have their own criteria. Every stage exits on documented evidence rather than on elapsed time, because a quiet fortnight is not the same thing as a stable service. Handled properly, this section is where a migration becomes an operational reality rather than a completed project.

8.1 Hypercare

Hypercare is the period of heightened support immediately after go-live, and it is defined here with a named roster, coverage hours and an escalation path rather than an assumption that the migration team remains available. Its

exit criteria are objective — a stated number of consecutive days without severity one or two incidents, with backup and monitoring proven in steady state — so that the end of hypercare is a demonstrated condition rather than a date in a plan. The steady-state support owner is named, and the handover to them is explicit. Issues raised during hypercare are triaged through a defined route so that nothing depends on knowing which individual to telephone.

	<i>SOW record — ", communication plan, service desk readiness checklist, and hypercare approach. 1 Software Development Units are registered with Special Economic Zones or Software Technology Parks. Exit Criteria	<i>Objective —</i>

Table 8.1 — Hypercare

8.2 Operational Readiness

Operational readiness is verified control by control in production, because each of these controls was inherited implicitly in the datacenter and exists in Azure only where it has been configured and proven. Monitoring is tested by causing an alert to fire and confirming it reached a person; backup is tested by performing a restore. Patching enrollment, log export to the security platform, cost baseline capture and a scheduled right-sizing review are each confirmed with a date. The section closes with the known issues and workarounds the support team is inheriting, so that nothing arrives as a surprise after the migration team has moved on.

	<i>Not on file — What watches the tenant and its integrations, and who receives the alert. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).</i>
Availability Monitoring	

Integration Failure Alerting	<i>Not on file — How a failed interface is detected — silent failure is the common outcome without this. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).</i>
Log Export to SIEM	<i>Not on file — Which vendor logs are exported, by what mechanism, retention on both sides. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).</i>
Data Export / Backup Regime	<i>Not on file — Independent export cadence, where it lands, and who verifies it — the on-premises backup no longer covers this data. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).</i>
Vendor Status & Notifications	<i>Not on file — Status page, maintenance notices, release notes — and who is subscribed. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).</i>
Scheduled Jobs Confirmed Running	<i>Not on file — Every job in §5.12 has completed a successful scheduled execution in the target, with the date of each first run recorded. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).</i>
Support Runbook	<i>Not on file — Where the steady-state operational procedure lives. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).</i>
Known Issues Carried Into Service	<i>Not on file — Accepted gaps from §5.10.1 that support must be briefed on. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).</i>

Table 8.2 — Operational Readiness

8.3 Decommission

Formal decommissioning of the legacy estate sits outside this engagement's contracted scope, but a defined set of closure tasks still belongs to this migration because leaving them undone leaves live access paths to a retired application. Unretired service accounts, security groups, firewall rules, site-to-site tunnels and certificates continue to function after the application stops being used and represent standing exposure rather than dormant configuration. Each step listed below is therefore assessed individually and marked as in scope, out of scope, or to be confirmed, with the decision and the person who made it recorded against it. Steps assessed as out of scope are not deleted from the list; they are assigned a named owner outside this engagement so that the obligation is transferred rather than dropped. The result is a closure position where every task has either been performed or has been consciously handed to someone accountable for performing it.

Step	Action	In Scope?	Owner	Scope Decision By / Date	Verification
1	Not on file — Confirm no active users or integrations on the legacy system for N days. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).	☐ Yes ☐ No ☐ TBC	Not on file — searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Table 8.3 — Decommission

8.4 Post-Migration Review

What worked and what did not is recorded here while the detail is still recoverable, so that the next application in the program benefits rather than repeats. Root causes are recorded rather than symptoms, and steps whose actual duration differed materially from plan are corrected for future playbooks. Changes to the rollback procedure are captured whether or not rollback was invoked, since a plan that was never exercised is still a plan that can be improved. A review that produces no change to the next playbook or to the program process has not been completed.

Not on file — Practices to repeat, stated specifically enough to be reused. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Data and Databases), BIA_Applications_20251113, BIA_Capability_and_Application, Applications Sessions 1–3 responses, DHCP_DNS_list, Policy_list, Key_Vault_Certs_20251110,

What Worked

	Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; requested from GEHA (Appendix B).
What Did Not	Not on file — Steps that failed, ran long, or were discovered late — with the root cause, not the symptom. searched the full evidence pack — Server_VM_Inventory (LS/LX), Matilda Discovery Assessment (all visible tabs), GEHA_SQLServers_DBDetails_Inventory, DBA Migration Artifacts, Discovery Report Inventory v1.0 (incl. Table 8.4 — Post-Migration Review

9. Roles & Responsibilities

Responsibility across the migration lifecycle is assigned here using the RACI model, with exactly one accountable owner for each task. The distinction between responsible and accountable matters most at the two points where migrations stall: the go/no-go decision and the rollback decision. Consulted and informed parties are recorded so that teams learn of changes affecting them before rather than after the event. Where this matrix and the ownership register disagree, the ownership register governs and the discrepancy is corrected here.

Task	App Owner	Migration Team	SaaS Vendor	Security	End Users	Admin / Support Manager Dale Gibson
Tenant configuration	C	A/R	C	C	I	C
Data mapping & load	C	A/R	C	I	I	C

Reconciliation & acceptance	A	R	I	I	C	C
Rollback decision	A	R	I	I	I	C
Operational readiness	C	R	C	A	I	C
Decommission	A	R	I	C	I	C

Table 9 — Roles & Responsibilities

10. Risks, Assumptions, Dependencies & Open Items

Four distinct records are maintained here, and keeping them distinct is what makes them useful. A risk is an event that may occur; an assumption is a reliance not yet verified; a dependency is a requirement controlled by someone outside this migration; and an open item is a question with an owner and a due date. Collapsing them into a single list, which is the usual habit, obscures the fact that they need entirely different treatment. Each record is maintained live through execution rather than completed once at authoring and left to age.

10.1 Risks

The risk register records potential events only. An event that has already occurred is an issue and is managed as one, and a reliance not yet verified is an assumption and belongs in the register that follows; keeping the boundary sharp is what stops the register becoming a list of everything anyone is uneasy about. Each risk carries a likelihood, an impact, a mitigation expressed as an action rather than an intention, and a named owner. Risks are reviewed at each program checkpoint rather than at authoring time alone.

Risk	Likelihood	Impact	Mitigation	Owner
Contract cliff 02/28/27 falls 52 days after the planned cutover 01/07/27 — cliff met with 52 days of float; renewal exposure \$42,687/yr only if the date slips past it (BASELINE v2.1 Wave Sequence)	—	—	Hold the 01/07/27 date; float 52 days	Norris Simmons
CLOSED 26-Aug-2026 — “CLIFF MISSED 2027-02-28” superseded: plan-of-record cutover 01/07/27 beats the cliff by 52 days (BASELINE v2.1)	—	—	Tracked on the program wave board	Norris Simmons
CLOSED 26-Aug-2026 — “PLAN CUTOVER 2028-04-01 PAST W4 DEADLINE” superseded: cutover 01/07/27 sits inside Wave 2 (BASELINE v2.1)	—	—	Tracked on the program wave board	Norris Simmons

Table 10.1 — Risks

10.2 Assumptions

Every assumption carries an owner and a date by which it must be confirmed or converted into a risk, because an assumption that is never tested becomes a defect at cutover. What is being taken as true is stated plainly alongside what breaks if it proves false, which is what allows the assumption to be prioritized rather than merely listed. Assumptions confirmed by evidence are marked as such with their source, and those that fail are escalated rather than quietly amended. This register is reviewed at the readiness review and again at the go/no-go gate.

Assumption	Why It Matters	Confirm By	Owner	Status
<i>Ruled effort size L = 16 weeks; 4 parallel migration tracks</i>	<i>Drives the cutover date and wave capacity</i>	<i>To be confirmed by GEHA</i>	<i>GEHA PMO</i>	<i>Open</i>
<i>Wave window 2026-08-01 onward per the program wave plan</i>	<i>Cutover must fall inside the wave window</i>	<i>Confirmed in the Wave Plan Tracker</i>	<i>CitiusTech</i>	<i>Confirmed</i>

Table 10.2 — Assumptions

10.3 Dependencies

Dependencies are requirements controlled outside this migration and therefore outside the migration team's ability to accelerate. Subscription provisioning, quota increases, circuit changes, policy exemptions, desktop image cadence and the readiness of other waves are typical, and each runs to a schedule owned by someone else. Every entry names an owner, the date by which it is needed and its current status, so that a slipping dependency is visible while there is still time to act. Dependencies at risk are escalated to the program rather than absorbed silently into the application's own float.

Dependency	Type	Owner	Needed By	Status

		51110, Subscription_Management_Groups and vmware_hosts_DRS — no record for this application; request ed from GEHA (Appendix B)		

Table 10.3 — Dependencies

10.4 Open Items

Every unresolved question and unassigned ownership raised anywhere in this playbook is collected here, so that nothing depends on a reader noticing a gap buried in a distant section. Each item carries an owner, a due date and a status, and items are closed with the answer recorded rather than simply removed. This register is the practical agenda for the recurring working session with GEHA. An item still open at the go/no-go gate is a decision for the gate rather than an administrative loose end.

Item	Raised	Owner	Due	Status
Appendix B item 01 — Azure Migrate project access / first discovery export	13-Aug-2026	GEHA (request not yet sent)	08/25/26 — ELAPSED as of 26-Aug-2026	Open

Disposition of the powered-off LS “turbonomic” VM (stale prior-generation appliance): decommission or cold-migrate — decision for ruling (register W2-TURB decision)	26-Aug-2026	GEHA (Dale Gibson) / CitiusTech	10/23/26	Open

Table 10.4 — Open Items

11. Timeline & Milestones

The milestone dates this playbook commits to are recorded here, each traceable to the section that produces its supporting evidence. Dates are stated rather than implied, and the contract cliff is shown as a hard date so that available float is visible at a glance rather than calculated by the reader. Where a milestone has both an achievable date and a planned date, both are shown and the difference is left visible rather than reconciled away. This table is the schedule of record for the application and is reconciled with the program wave plan at every checkpoint.

Milestone	Target Date	Status
Landing zone and subscription confirmed	—	Not started
Target design signed off	—	Not started
G-1 Azure Migrate discovery validation closes	09/30/26	Not started
Design start (BASELINE v2.1)	10/15/26	Not started
Design accepted (BASELINE v2.1)	10/28/26	Not started
Playbook frozen (BASELINE v2.1)	11/06/26	Not started
Playbook approval (BASELINE v2.1)	11/09/26	Not started
Rehearsal pass 2 complete and defect-free	—	Not started
UAT sign-off	—	Not started
Readiness review held	—	Not started
Go / no-go gate	—	Not started
Production cutover (BASELINE v2.1)	01/07/27	Not started
Cutover (BASELINE v2.1)	01/07/27	Not started
CONTRACT CLIFF — \$42,687 at stake	02/28/27	Hard date
Hypercare ends (BASELINE v2.1)	01/27/27	Not started
Source retention released	—	Not started
Source decommissioned	—	Not started

Table 11 — Timeline & Milestones

11.1 Effort & Duration Record

Planned and actual effort are recorded side by side, together with elapsed duration, so that later waves are planned from observed velocity rather than from estimate. Authoring, discovery, build, testing, cutover and

hypercare are measured separately, because they scale differently and the ratio between them is what makes an estimate transferable. Variance is recorded with its cause rather than as a number alone. Reporting these figures to the program is what allows the datacenter exit date to be planned against evidence instead of optimism.

Measure	Planned	Actual	Variance & Cause
Playbook authoring effort (person-days)	—	—	—
Assessment and discovery effort (person-days)	—	—	—
Build and configuration effort (person-days)	—	—	—
Testing and rehearsal effort (person-days)	—	—	—
Cutover window (elapsed hours)	—	—	—
Hypercare (elapsed days)	—	—	—
Total elapsed time, kickoff to decommission (days)	—	—	—

Table 11.1b — Effort & Duration Record

12. Sign-Off

Approval to execute is recorded here, and each signatory is a named individual accountable for the sections relevant to their role rather than a representative of a team. Signing confirms that the target design, the cutover plan and the rollback position documented in this playbook are approved for execution as written. Signatures are obtained before the go/no-go gate rather than retrospectively. A playbook signed on this basis is the authority under which the cutover proceeds.

By signing below, stakeholders confirm that the vendor boundary, tenant configuration and cutover plan documented in this playbook are approved for execution.

Name	Role	Date
Norris Simmons (Owners tab row 37, BASELINE v2.1)	Application Owner	
To be provided by GEHA	Migration / Technical Lead	
To be provided by GEHA	Security	
Christy Ammel (DBA / Production Control — program record)	DBA / Production Control	

Name	Role	Date
To be provided by GEHA	Network	
To be provided by GEHA	Procurement / Vendor Management	

Table 12 — Sign-Off

Appendix A — Program Decision References

This playbook does not restate program decisions. Each reference below points to the entry in the CitiusTech Decision & Evidence Register, the append-only historical record in which the decision, its evidence class, its source and the checkpoint it was made under are held. The register is available to GEHA on request.

Ref. CF-08 — held in the Decision & Evidence Register (conflict-log entry).

Ref. REG-001 — Palo Alto Firewall. Recorded 2026-08-08; evidence class: Attested.

Ref. REG-017 — LiteSpeed scope confirmed; Azure Backup withdrawn. Recorded 2026-08-11; evidence class: Confirmed (GEHA-verbal).

Ref. REG-030 — Comprehensive review: display defects found and fixed. Recorded 2026-08-11; evidence class: Derived — audit.

Appendix C — GEHA Discovery Responses (verbatim)

The answers below were given by GEHA during the application discovery sessions and are reproduced without alteration. They are the source for several statements in the body of this playbook.

Q: What version of Turbonomic are you currently running (On-Prem appliance, SaaS, Hybrid) ?

A: On-prem

Q: How is turbonomic deployed today ? Single VM/Appliance - HA Cluster ?

A: Single VM

Q: What is the underlying infrastructure - vSphere, Hyper-V, Kubernetes, Bare Metal ?

A: vSphere, containerized app within VM

Q: CPU/Memory/Storage ?

A: 8vcpu, 128GB mem, 1.5TB

Q: What business problems does Turbonomic solve for you today ? Resource Optimization, Rightsizing VMs, Scaling workloads, Predictive Analytics, Application performance management, Cost Reduction ?

A: all listed

Q: What platforms does Turbonomic integrate with today ? VMWare/vCenter - Hyper-V etc?

A: VMware and Azure

Q: Is there any ITSM system connected to Turbonomic ? Is there any monitoring currently in place ?

A: ServiceNow integrated; Splunk monitors

Q: What workloads does Turbonomic currently analyse - VMs, Containers, Database, Application, Storage volumes ?

A: Monitors storage volumes and computing

Q: What optimization actions are automated ? Resize VM, Move VM, Scale deployments, Storage resizing, IOPS limits adjustments ?

A: nothing is automated at the moment

Q: How frequently do optimization recommendations run ?

A: Constant

Q: What is the current size of Turbonomic historical database ? How long is the performance data retained ? Do you need to migrate the historical performance analytics ?

A: Don't have on-prem SQL DB.

Q: How does authentication work today ? LDAP/AD, SSO/SAML

A: ldap

Q: SLA, RTO, RPO requirements ?

A: no

Q: What is the current Licensing model ? Is it transferable to cloud ?

A: Transferable to cloud, workload-based

Appendix B — Information Requested from GEHA

Fields shown in this playbook as “not yet provided” correspond to the items below. Each is a specific request to GEHA with the date by which it is needed to keep this application on its planned wave. Items marked blocking prevent the affected section from being completed at all.

Item 01 — Azure Migrate project access / first discovery export · Category: Tool access · Required by: 2026-08-25 · BLOCKING

Why it is needed: Corroborates attested 26-Jul deployment; starts IFD reconciliation; gates G-1 close

Item 02 — Formal G-1 gate completion date · Category: Schedule · Required by: 2026-08-18 · BLOCKING

Why it is needed: W1 cutover planning; Varonis 6-day cliff margin

Item 05 — Vendor portal logins: Progress, Cohesity, Archer · Category: Tool access · Required by: 2026-09-15

Why it is needed: Gated [L]-class artifact retrieval

Item 06 — Owner reassignments (5 departed) + OnBase director ruling · Category: Ownership · Required by: 2026-09-01 · BLOCKING

Why it is needed: Playbook sign-off + cutover approvals (C7/CF-12)

Item 10 — Capacity parameters: tracks, freeze calendar, LZ readiness · Category: Schedule · Required by: 2026-08-31 · BLOCKING

Why it is needed: 3-track assumption drives all wave loads + W3/W4 overloads

Item 12 — Backup policy export + per-app protection groups (Cohesity) · Category: Config export · Required by: 2026-09-30

Why it is needed: Per-workload re-protection steps in each wave (REG-008)

Item 14 — Current DNS zone + firewall rule exports (refresh) · Category: Config export · Required by: 2026-09-30

Why it is needed: DNS/firewall updates at each cutover; corpus copies stale

Item 16 — Table-level write audit: per-DB object permissions + SQL Audit/Query Store capture of writes by login · Category: Config export ·

Required by: 2026-09-15

Why it is needed: Shared-TABLE writers not captured by any source (F-DB-1); changes cutover grouping + rollback design

Item 17 — Cohesity DataProtect support confirmation for every migrating SQL instance (OS/SQL version/config vs Cohesity requirements) ·

Category: Backup / DR · Required by: 2026-09-15 · BLOCKING

Why it is needed: Azure Backup withdrawn per REG-017 — a non-supported instance now has NO fallback protection path at cutover
